DETAILED ACTION

Claim Objections

Claims 2 and 8-13 objected to because of the following informalities: Claim 2 recites "20" in line 3 of the claim and claim 8 recites "20" in line 2 of the claim. In each of these cases the "20" should be removed. Claims 9-13 are objected to since they depend from objected claim 8. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-10, 13-16, and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Carlson et al.

As per claims 1-3, 6-10, 13-16, and 19, Carlson et al. discloses an air control system/method comprising an environmental temperature sensor 139, a single controller (Figure 8) receiving the temperature signal and determining if it is within a predetermined temperature range (76° F - 80° F) and maximizing airflow if the above the range by controlling an air actuator (column 11, lines 11-15), the system comprising a plurality of appliances (plurality of distribution units 12) interfaced with the controller, the sensor being a temperature sensor, and the actuator being a modulated damper.

Application/Control Number: 10/763,950 Page 3

Art Unit: 3744

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4, 5, 11, 12, 17, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carlson et al.

As per claims 4, 5, 11, 12, 17, and 18, Carlson et al. does not teach an interface for communicating with an external management system or the controller retaining historical data. Official notice is taken that remote management of HVAC systems is old and well known, and also that it is generally well-know to keep historical data of control systems. It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply both of these features to the system of Carlson et al. for the purpose of allowing for convenient remote control, monitoring, and diagnostics of the air management system.

Art Unit: 3744

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc E. Norman whose telephone number is 571-272-4812. The examiner can normally be reached on Mon.-Fri., 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on 571-272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
